

Use AI talk between Revit and Notion

Friday, November 14, 2025 4:14 PM

Use fastapi,

```
from fastapi import FastAPI
import json
import os
app = FastAPI()
```

```
@app.get("/extract-levels")
```

To run the fastapi:

```
python -m uvicorn server:app --reload
```

Return 200 means okay
Return 400 means error

```
from fastapi import FastAPI
import json
import os
app = FastAPI()
@app.get("/")
def home():
    return {"status": "Revit Automation Server running"}
@app.get("/extract-levels")
def extract_levels():
    # If server.py and levels.json are in the same folder,
    # this relative path is enough:
    json_path = "levels.json"
    if not os.path.exists(json_path):
        return {"status": "error", "message": f"{json_path} not found"}
    with open(json_path, "r") as f:
        levels = json.load(f)
    if isinstance(levels, list) and len(levels) == 1 and isinstance(levels[0], list):
        levels = levels[0]
    return {"status": "success", "levels": levels}
```

```
server.py
agent.py
run_dynamo_export.bat
levels.json
```

STEP 0 — Install Required Packages (Only Once)
Open PowerShell:

```
pip install fastapi uvicorn anthropic requests
```

STEP 1 — Start the FastAPI Server
Open a NEW PowerShell window.
Go into your project folder:

```
cd C:\Users\yhuang\Downloads\revit_automation_server
Run the server:
```

```
uvicorn server:app --reload
If successful, you should see:
```

```
Uvicorn running on http://127.0.0.1:8000
Application startup complete.
! IMPORTANT:
• The server must stay running.
• Do NOT close this terminal.
```

STEP 2 — Set Your Anthropic API Key
Open a SECOND PowerShell window.
Go into the same folder:

```
cd C:\Users\yhuang\Downloads\revit_automation_server
Set your API key (replace with your real key):
```

```
$env:ANTHROPIC_API_KEY="sk-ant-xxxxxxx"
(Optional test to confirm it's set)
```

```
python -c "import os; print(os.environ.get('ANTHROPIC_API_KEY'))"
It should print your key.
```

STEP 3 — Make Sure Your Model Name Is Correct
Open agent. py.
Make sure it says:

```
MODEL_NAME = "claude-3-5-sonnet"
X NOT:
```

```
claude-3-5-sonnet-latest
Save the file.
```

STEP 4 — Run the Agent
In the SECOND PowerShell window (where the API key is set), run:

```
python agent.py
You should see:

Chat started. Type anything or 'quit' to exit.
```

STEP 5 — Test Basic Chat
Type:

```
hi
Claude should respond normally.
```

STEP 6 — Run the Full Automation
Now type something like:

```
extract the level data from revit to notion
```

My claude API key: sk-ant-api03-gDXY4rLwRbSn4Vi_L6C9g1DV5Ccc1060nknbug-Ma2lQHyT8FIWZXKu9yDT4izj-Rw3KPA_v4ftIq54Dn616-Q-AueoQwAA

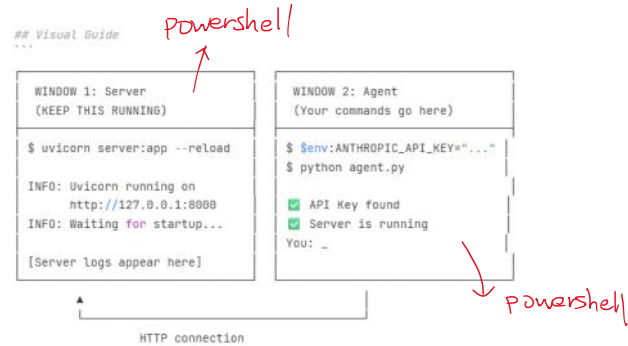

```
curl https://api.anthropic.com/v1/messages \
  --header "x-api-key: sk-ant-api03-RneVIHBchZuHl-h84eT7Nd4IaWZi0TJq-aNBNpec6Do2Yxah8dGkOfk5o5eVwXW7ZrYy4w7h5Mt8kk1-p9vycQ-sh_ZAGAA" \
  --header "anthropic-version: 2023-06-01" \
  --header "content-type: application/json" \
  --data '{
    "model": "claude-sonnet-4-20250514",
    "max_tokens": 1024,
    "messages": [
      {
        "role": "user",
        "content": "Hello, world!"
      }
    ]
  }'
```

```
setx ANTHROPIC_API_KEY "your_real_claude_key"
setx NOTION_API_KEY "your_real_notion_key"
setx NOTION_DATABASE_ID "your_database_id"
```

The logic of running:

```
powershell
python agent.py
```

Visual Guide

```
-uvicorn server:app --reload
```

```
-$env:ANTHROPIC_API_KEY=""
python agent.py
```
